

District administrator of the district of Göttingen, Marcel Riethig, visits Bioventure – Cooperation Talks on LIFE.SCIENCE.REGION.Göttingen

Göttingen, August 5, 2024 – Today, the District Administrator of the Göttingen district, Marcel Riethig, paid a visit to the biotech investment firm Bioventure. The visit focused on discussions about the future of the life science sector in Göttingen and potential cooperation opportunities for investors in biotechnology and medical technology.

Nico Straub, Partner at Bioventure, along with Simon Kaltenhäuser and Dr. Akos Farkas, reported on the significant role that Bioventure plays as a pioneer in the life science sector in Göttingen. “We are pleased that the District Administrator is visiting our company and discussing the future development of the location with us. Göttingen already offers an excellent foundation for biotechnology and medical technology, and we see great potential for further growth,” said Nico Straub.

A central topic of the discussion was the attractiveness of the location for financial investors. “Our goal is to further strengthen and expand the life sciences sector in Göttingen. We are convinced that the location is also of great interest to other investors in the biotech field,” explained Simon Kaltenhäuser. Bioventure reaffirmed its commitment to supporting this initiative and emphasized the importance of cooperation opportunities for the future.

“Our region offers especially favourable conditions for start-ups to succeed and grow. The necessary venture capital is provided by investors like Bioventure. They play a key role in the growth of start-ups, and I am grateful for Bioventure’s commitment,” said District Administrator Marcel Riethig.

Another important point was the construction of the company’s new headquarters in Göttingen. “The construction of our new headquarters in the Göttingen urban area or its immediate vicinity represents a promising option for us. We are looking for a representative location that meets our growth prospects,” said Nico Straub. The planned new site is intended not only to meet current requirements but also to allow for future expansions.

The discussion once again highlighted the important role of Bioventure as a key player in the region and the need to create substantiating conditions for investors. “We appreciate the support from the district and hope that together we can set the course for a successful future in the life sciences sector,” Straub concluded.

About Bioventure:

Bioventure is an internationally active company specializing in financing groundbreaking biomedical companies and research projects. The company brings together a wide range of investors to bring significant and promising projects to market maturity.

Brief Definition of Life Sciences:

Life sciences is a scientific research field that deals with the processes and structures of living organisms. These include disciplines such as biology, medicine, biochemistry, pharmacy, biophysics and many more. These areas are often interdisciplinary and can encompass both basic and applied research.
